

Introducing the next generation in energy-efficient productivity.

Get more from your machinery than ever before with new Mobil DTE 10 Excel Series. Engineered to better address the lubrication demands of a new generation of hydraulic equipment, Mobil DTE 10 Excel Series can lift cleanliness and efficiency to new heights — as it helps lower operating costs.

In fact, thanks to its dramatically increased hydraulic efficiency — up to 6 percent better than the standard fluids* — visibly better system cleanliness, and outstanding durability, you can enjoy longer productivity, decrease machine maintenance, and extend oil drain intervals, and can potentially save thousands of kilowatt-hours a day compared with competitive standard oils.

All of which adds up to one thing: increased productivity.

So reduce your power consumption and increase your machine output. With a breakthrough that won't just make your machines run but help them fly. On less energy, we might add. For more information on Mobil DTE 10 Excel Series, go to www.mobilindustrial.com.

*Results are based on a controlled laboratory test and may vary depending on operating conditions.

Energy efficiency relates solely to the fluid performance when compared with ExxonMobil's standard hydraulic fluids. The technology used allows up to 6% increase in hydraulic pump efficiency compared with Mobil DTE 20 Series when tested in standard hydraulic applications. The energy efficiency claim for this product is based on test results on the use of the fluid conducted in accordance with all applicable industry standards and protocols. For more information, contact your local ExxonMobil Technical Help Desk.
